Encoded Characters

All encoded characters should be accessible with every unicode capable application. For details about Unicode Blocks visist the <u>Unicode Website</u>.

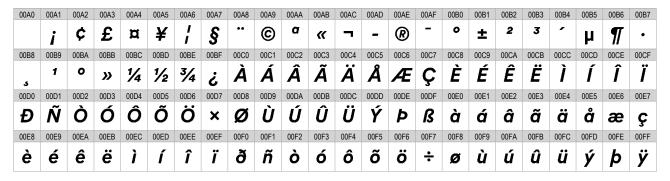

Basic Latin

Block from 0000 to 007F

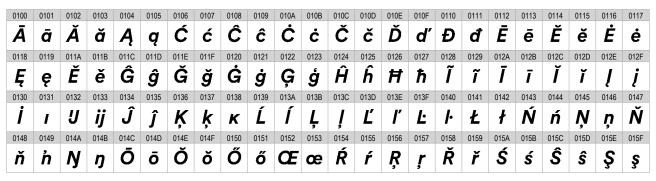

Latin-1 Supplement

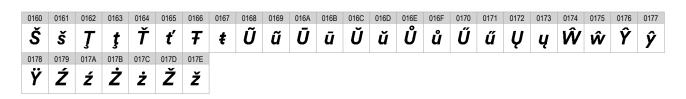

Block from 0080 to 00FF

Latin Extended-A

Block from 0100 to 017F

Latin Extended-B

Block from 0180 to 024F

IPA Extensions

Block from 0250 to 02AF

Spacing Modifier Letters

Block from 02B0 to 02FF

Greek and Coptic

Block from 0370 to 03FF

Cyrillic

Block from 0400 to 04FF

Latin Extended Additional

Block from 1E00 to 1EFF

General Punctuation

Block from 2000 to 206F

Superscripts and Subscripts

Block from 2070 to 209F

Currency Symbols

Block from 20A0 to 20CF

Letterlike Symbols

Block from 2100 to 214F

Number Forms

Block from 2150 to 218F

Arrows

Block from 2190 to 21FF

Mathematical Operators

Block from 2200 to 22FF

Enclosed Alphanumerics

Block from 2460 to 24FF

Geometric Shapes

Block from 25A0 to 25FF

Miscellaneous Symbols

Block from 2600 to 26FF

Dingbats

Block from 2700 to 27BF

Private Use Area

Block from E000 to F8FF

Alphabetic Presentation Forms

Block from FB00 to FB4F

Arabic Presentation Forms-B

Block from FE70 to FEFF

Unencoded Glyphs

All unencoded glyphs are accessible with OpenType layout feature capable applications. For a complete list of supported OpenType layout features see the next section.

OpenType Layout Features

For details about OpenType Layout Features see the OpenType Layout tag registry.

Substitution Features

Access All Alternates

This feature makes all variations of a selected character accessible.

Contextual Alternates

In specified situations, replaces default glyphs with alternate forms which provide better joining behavior.

Standard Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

Tabular Figures

Replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

Numerators

Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

Denominators

Replaces selected figures which follow a slash with denominator figures.

ractions

Replaces figures separated by a slash with 'common' (diagonal) fractions.

Superscript

Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

Subscript

The "subs" feature may replace a default glyph with a subscript glypht.

Scientific Inferiors

Replaces lining or oldstyle figures with inferior figures (smaller glyphs which sit lower than the standard baseline, primarily for chemical or mathematical notation). May also replace lowercase characters with alphabetic inferiors.

Ordinals

Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

(G}

Case-Sensitive Forms

Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.

Ş·Ş

Localized Forms

This feature enables localized forms of glyphs to be substituted for default forms.

g·g

Stylistic Alternates

Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.

Stylistic Set 1

Glyphs in stylistic sets may be designed to harmonise visually, interract in particular ways, or otherwise work together.

Stylistic Set 7

[8]

Stylistic Set 8

[9]

Stylistic Set 9

?

Justification Alternatives

Improves justification of text by replacing glyphs with alternate forms specifically designed for this purpose (they would have less or more advance width as need may be).

?

Alternate Annotation Forms

Replaces default glyphs with various notational forms (e.g. glyphs placed in open or solid circles, squares, parentheses, diamonds or rounded boxes).

Positioning Features

Capital Spacing

Globally adjusts inter-glyph spacing for all-capital text. Most typefaces contain capitals and lowercase characters, and the capitals are positioned to work with the lowercase. When capitals are used for words, they need more space between them for legibility and esthetics.

Kerning

Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.
